Art Unit: 1762

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Tang et al (6228488). This reference discloses in col. 5, line 65 to col. 6, line 40 and col. 11, lines 1-30 a method of dying seat belts comprising woven polyester material containing PET-polycaprolactone diblock copolymer fiber comprising heat treating the belt under tension in an oven in the range of about 100 to 180 degrees C. It is the examiner's opinion that the claimed process is anticipated by the reference process.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tang et al for the same reasons as urged in the above paragraph. The limitations of these dependent claims are considered conventional and do not render these claims unobvious.

Application/Control Number: 09/891,084

Art Unit: 1762

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over. Tang et all for the same reasons as urged in the above paragraph in view of Van Uden et al.

The primary reference does not disclose washing, steaming, finish coating and drying the web. Van Uden et all discloses in col.3, lines 1-20 steaming, washing and drying the dyed web. It is the examiner's opinion that it would have been obvious to one having ordinary skill in this art at t5he time the invention was made to perform these steps on the web of the primary reference since these steps are conventional steps used in processing webs.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bernard D Pianalto whose telephone number is 703 308 2332. The examiner can normally be reached on 5:30-6:00 Mon-Wed.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shrive P Beck can be reached on 703 308 2333. The fax phone numbers for the organization where this application or proceeding is assigned are 703 872 9310 for regular communications and 703 872 9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 306 5665.
